

Overview

Take your Training and Certification Courses On-Line with Skills M5.

Designed specifically to deliver interactive computer based training for equipment operators, system maintainers and certification based training, Skills M5 provides interactive courseware with flexible course options, including self-paced (no exams, and scored exams), or Instructor managed training (exams are scored and student progress monitored).

Create Better Content Faster

Create reusable, interactive courseware 30% faster than Microsoft Word or Power Point with Skills Studio, the integrated easy-to-use authoring tool that is included with Skills M5. Template driven to provide consistent presentation, training developers will benefit from the easy to use authoring environment.

- Linking of external objects (Images, Movies, Power Point)
- Lessons created based on smart templates
- Authors can focus on content, not formatting
- Presentation is controlled by style templates
- Create multiple choice; images quiz and interactive assessments

Skills M5 addresses the requirement for on-line learning to utilize multimedia and technical data, including S1000D content. While the author works in a forms based authoring environment, XML is created when a lesson is saved to the course tree. All Data modules, images and linked content is stored in the database. The read only view into the S1000D Repository (R4i CSDB Server) makes content reuse as easy as "Drag & Drop".

A Proven Platform

Skills M5 addresses the five key steps of learning:

- **Analyze** student and task requirements,
- **Design** the course outline,
- **Develop** engaging, interactive courseware,
- **Conduct** the training and
- **Evaluate** both the student and the courseware. Skills M5 is used by leading Defence, Aerospace, Engineering corporations and Registered Training Organizations (RTO)'s to deliver quality training courses and measured outcomes on-line.

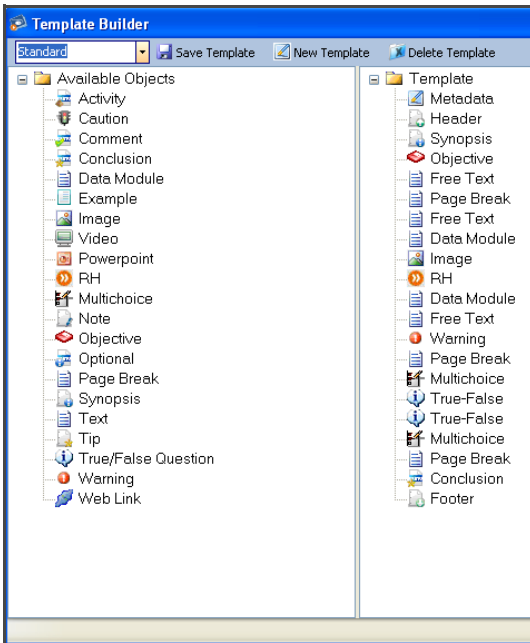

Skills M5

Skills M5 is the easy to use Competency Based Training (CBT) system that enables the rapid creation and distribution of online courses and advanced student management, providing an end-to-end e-Learning environment

Easy Student Management

The flexible on-line administration system allows instructors to create customized training courses and monitor student progress, all via their web browser.

Reduce Costs. Reduce the cost of training Authors on authoring tools, and their time creating content. Reduce the cost of coordinating courses, students and maintaining records with the on-line workflow capability.

Expand your market. Take your training courses on-line with a fully managed on-line training capability that suits your budget, builds your market and carries your company branding. You will retain complete control of your students, courses and outcomes. Provided as a hosted service, there is no software to buy or any additional computer equipment required.

Simplicity for you. With Skills Studio, you have the ability to author, manage and distribute your courseware on-line. With the easy to use forms based authoring tool that gives you a fast, simple method of building on-line content, including graphics, multimedia, and power point files, without the need for any specialist skills. You can then manage your courses and students from any internet enabled PC.

Simplicity for your students. Offer more than paper based courses! Accessed via an internet enabled PC, your MyClass e-Learning Portal is a user friendly training environment that guides students through their on-line learning courses and exams.

Student Analytics. Monitor your students with detailed statistical reports. Instructors can monitor how their students are progressing, what training they have completed and their results.

Cost Effective. The Skills M5 e-Learning system can be purchased and installed in your office, or is also available as a fully managed service. Our e-Learning Portal is licensed as "Pay As They Learn (PATL)". You pay a small student access fee for each new student that you enrol to a course.
