

Expedite and streamline your IETM review process, with R4i ReViewer - a clever review tool inside the R4i Viewer. Gain speed with document review, change, auditability and traceability.

R4i ReViewer is a built-in toolset that can be activated within the R4i Viewer. It allows engineering, logistics and Project Office personnel to check and review content within the full context of an IETM.

Using the R4i Viewer, you now have easy access to an intelligent review tool, via a licence.

This **non-proprietary review system** removes the need to email PDFs of entire chapters or specific pages (with little context), to customers or subject matter experts for review.

Instead, you can **send a complete documentation set** and working, interactive IETM, into which they can electronically mark changes and make comments and send back.

ReViewer **speeds up the review process**, as it's easy and fast for reviewers to use and there is no need to manually mark up paper printouts to then fax back.

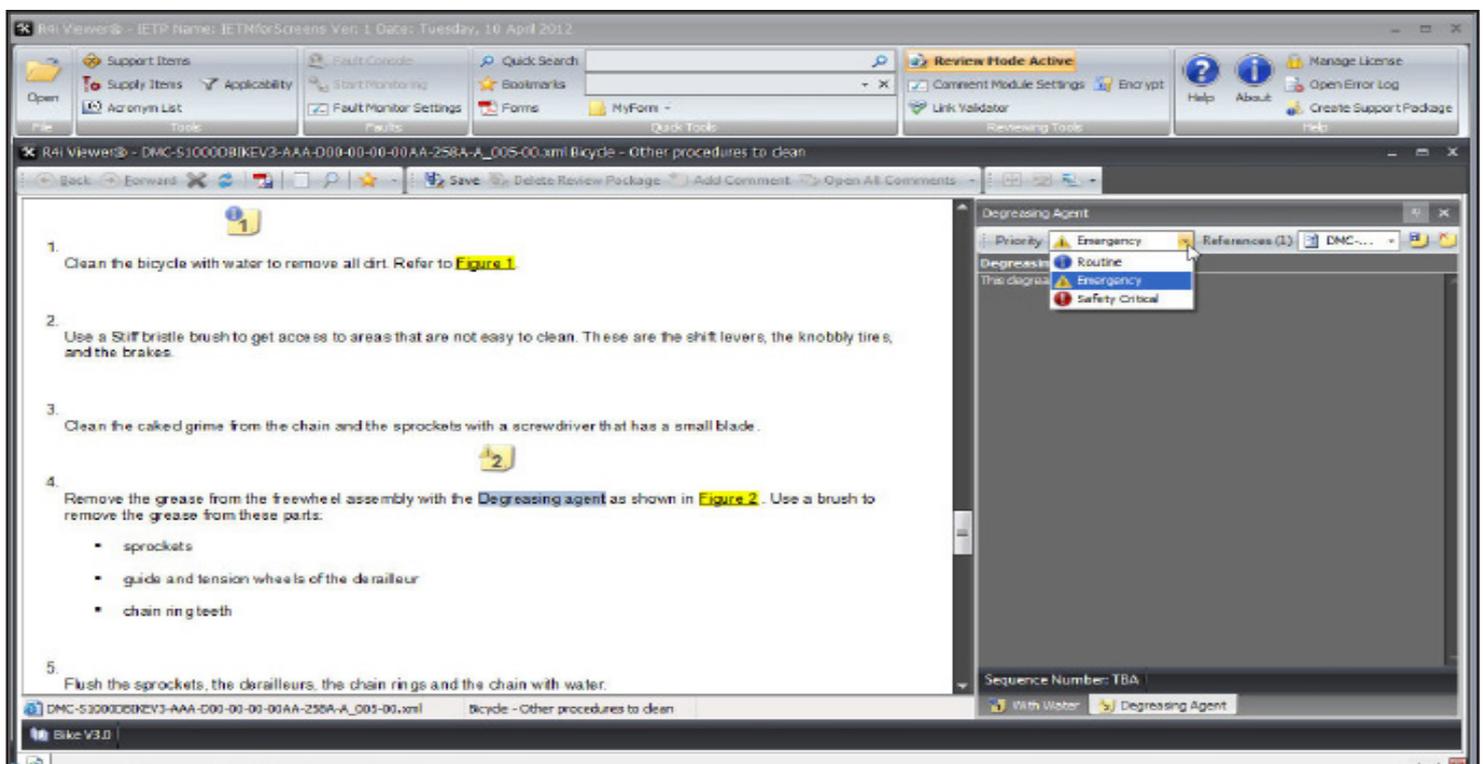

Unique 'sticky notes' feature

Within your IETM content, you can add sticky notes that contain your comment information. You can then:

1. Save the note as a Comment Module for storing in your Common Source Database (CSDB) for audit and traceability.
2. Save all notes inside the IETM (Review Package), so that the IETM can be returned to the original OEM/supplier. They can open the IETM content with the sticky notes in place for easy auditing.

ADG is the first Vendor to output review feedback to the S1000D Specification Comment Module.

An example of this sticky note feature is shown in the image below.

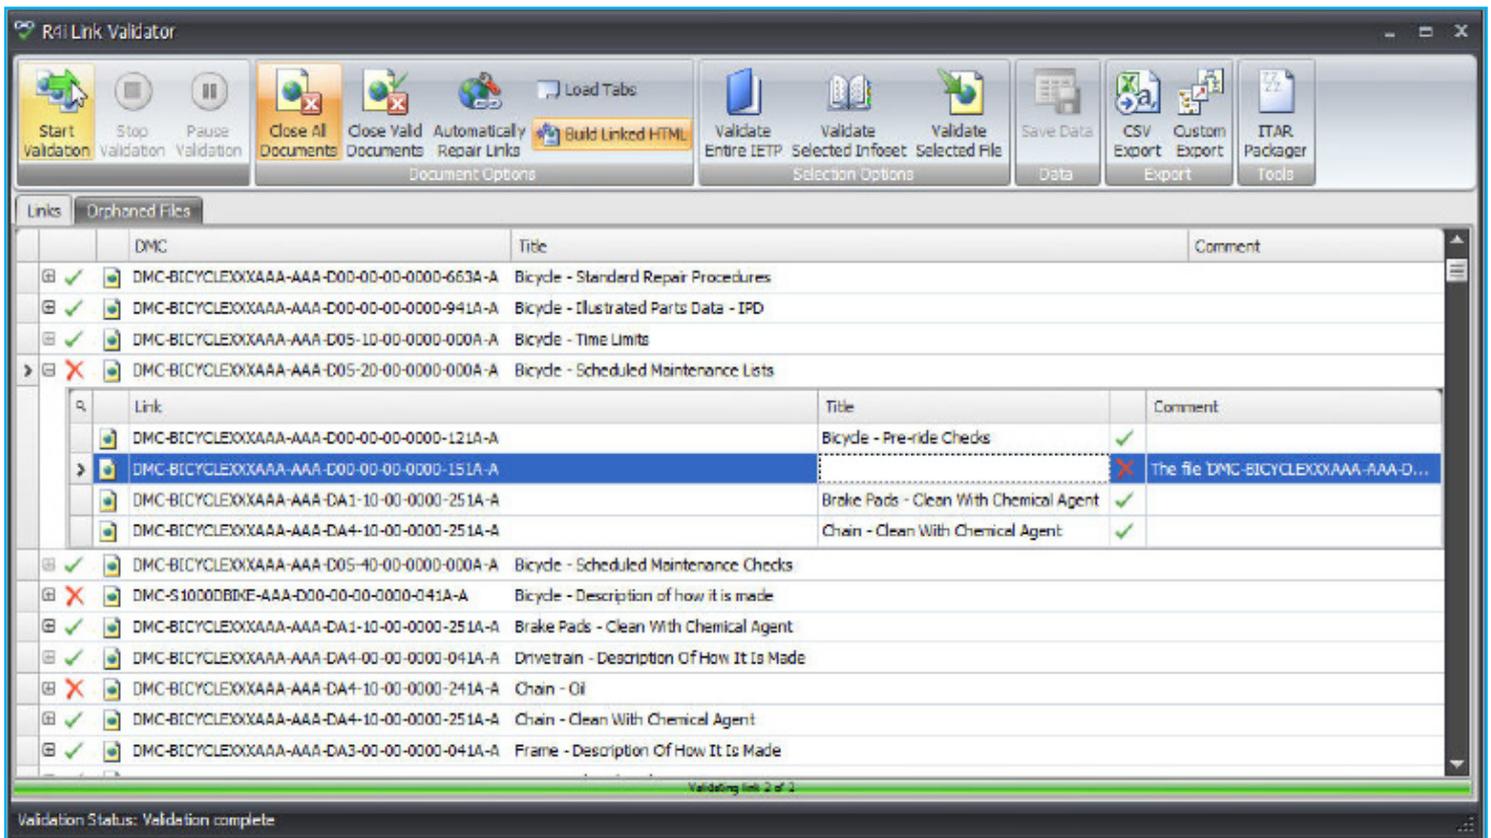

Benefits of using R4i ReViewer

R4i ReViewer leverages key R4i Viewer technology to ensure reviews are performed on the latest IETM content.

Benefits of using R4i ReViewer include:

- **Context.** Reviewers have access to the entire interactive IETM, as will be delivered to the maintainers in the field, giving context to what they are reviewing.
- **Fast turnaround.** Reviewers can quickly and easily make their notes against the data modules on screen and return them back to the OEM/writing team.
- **Electronic tracking** of comment module/changes and who requested each change.
- **Document history.** Gain a full history of changes made from customer Comment Modules, which are tracked in the CSDB.
- **Change data.** Change Data delivered in the IETM will include any Interim Response and Final Response Comment Modules for easy audit by Review Teams.
- **Link validation.** Don't sit for days clicking on every image link and references to Data Modules to confirm the IETM is ready for delivery. The Link Validator checks all references (links) to Images and Data Modules are working and will give you a report of any Data Modules that have failed and why. Link Validator will also tell you if any content in the IETM is orphaned (no longer required).
- **Export to PDF.** Review teams often have to prepare a PDF version of Data Modules that have changed in the IETM delivery (along with their images). This feature will allow you to output your Data Module to PDF with one click.
- **Encryption.** After all the reviews and checks have been performed with your ReViewer tool set, the IETM is ready to deliver to the customer in the field. Encrypt the content and your data is ready to deliver fully protected.
